## DETAILED ACTION

1. Claims 1-15 are pending.

### *Election /Restriction*

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Group I, consisting of claims 1-5 drawn to a composition comprising an aldose reductase inhibitor, classified under Class 435, subclass 189, for example.
- Group II, consisting of claims 6-12 drawn to a method to make an aldose reductase inhibitor, classified under Class 435, subclass 69.2, for example.
- Group III, consisting of claims 13-15 drawn to another method to make a pharmaceutical composition comprising an aldose reductase inhibitor, classified under Class 435, subclass 41, for example.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions in Group I is related to inventions in Groups II - III as product and process to make the product. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, for e.g., the method of Group II to prepare said enzyme inhibitor is applicable to prepare a variety of industrial compounds (e.g., citric acid, antibiotics) and enzymes (e.g., alpha amylase). Similarly, the composition claimed in Inventions of Group I may also be prepared by different methods, for example chemical synthesis without microbial fermentation.

Inventions in Groups II and III are unrelated to each other because they are directed to different inventions that are not connected in design, operation and/or effect. These inventions are independent since they are not disclosed as capable of use together. They have different modes of operation, they have different functions, and/or they have different effects. One would not have to practice the various methods at the same time to practice just one method alone (MPEP § 806.04, MPEP § 808.01). In the instant case, for example inventions disclosed in claims encompassing invention in Group II are directed to a method to obtain a compound through fungal fermentation, wherein said compound is an inhibitor of an enzyme. Invention encompassing claims in group III is a method to make a pharmaceutical composition, wherein said composition comprises an enzyme inhibitor. Thus, inventions in Groups II and III do not share the same design, process steps to obtain two different compositions and the effects of those compositions.

The inventions discussed above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require

Independent searches. The search for each one of the above inventions is not coextensive particularly with regard to the literature search. Further, a reference that would anticipate the invention of one group would not necessarily anticipate or even make obvious another group. Finally, the consideration for patentability is different in each case. Thus, it would be an undue burden to examine all of the above inventions in one application.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification (i.e., class and subclass), and their recognized diverse subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is reminded that upon cancellation of claims to a non-elected invention, inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
